Purpose and  
description of the  
Training

In today's dramatically changing business world that has been disrupted by the events of the COVID-19 pandemic, there is a need for new concepts, mental models as well as concrete practices which are essential for becoming successful under the conditions of the "New Normal". Agile methodologies are at the core of a new mindset that is needed by every enterprise in each major industry in order to maintain or take over a leading role in these challenging times.

The first step on the journey towards Agility is to gain fundamental knowledge about the Agile approach and to understand how it can radically transform the way you work and collaborate and how your whole organization functions.

Our training »Agile for Winners« lets you experience Agile frameworks such as Scrum and Kanban first hand and in an interactive way. At the same time it provides a solid foundation for understanding the principles and mindset behind Agile methodologies.

It addresses questions such as:

- Why Agile?
- What different Agile methods are there and how do they work
- How to implement Agile and how to scale it towards Business Agility and Agile Leadership
- .....and how FUN AGILE is!

---

Participants

Senior level employees working in traditional roles as e.g. Consultants, Business Analysts, Project Managers, Development Engineers, Developers and similar.

Managers, Heads of, Business Owners, Team and Department Leads who want to understand how to work with Agile teams successfully and with great results.

Current Agile team members such as Developers, Product Owners, Scrum Masters, who want to deepen their understanding of the Agile mindset or get an overview of the existing frameworks like Scrum, Kanban, or Scrumban.

Employees in organizations that are making, or are considering, the switch to Agile.
